PROFESSIONAL SUMMARY

AI/ML engineer with just over a year of experience building and shipping machine learning applications, from CNN-based computer vision models to LLM-powered automation tools. Comfortable working the full pipeline — cleaning and preparing data, training and evaluating models, and wrapping the results in Flask/FastAPI APIs that other people can actually use. Most of this comes from building production tools at Intrillect alongside a handful of personal projects spanning computer vision, NLP, and recruitment analytics.

TECHNICAL SKILLS

AI & Machine Learning: Machine Learning, Deep Learning, Neural Networks, CNN, RNN, NLP, Transformers, Computer Vision, LLMs, Model Training, Model Evaluation, Feature Engineering, Data Preprocessing, Model Optimization

AI Pipelines & Frameworks: LangChain, Hugging Face Transformers, Sentence Transformers, FAISS, ChromaDB, Groq API, OpenAI API, Prompt Engineering

Programming Languages: Python, Java, SQL, JavaScript

Backend & APIs: FastAPI, Flask, REST APIs, API Integration, Streamlit

Databases: MySQL, SQLite, Supabase

Tools & Platforms: Git, GitHub, Docker, Postman, Jira, n8n, Power BI, Tableau

PROFESSIONAL EXPERIENCE

Intrillect — AI Engineer

June 2025 – Present

- Worked on AI-powered internal tools for recruitment workflow automation and data-driven decision support, improving process efficiency across hiring operations.
- Built and refined resume analysis and candidate screening models, applying NLP and LLM-based evaluation techniques to structure unstructured data.
- Applied prompt engineering to optimize LLM output quality, response structure, and system usability across multiple AI applications.
- Debugged, tested, and enhanced Python-based AI applications, improving reliability and reducing production issues.

KEY PROJECTS

Behavioral Emotion Monitoring System

Apr 2025

Python, OpenCV, TensorFlow/Keras, CNN, Tkinter, Pandas, Matplotlib, ReportLab

- Created a real-time facial emotion recognition system using a CNN-based deep learning pipeline to classify emotional states from live webcam input.
- Helped build a computer vision preprocessing pipeline including face detection, grayscale conversion, and normalization to improve model accuracy.
- Developed an automated logging system capturing timestamped emotion data, generating daily/monthly analytical reports with trend visualization.
- Designed the system with a privacy-first architecture, processing all data locally without storing sensitive images.

A.R.I.S.E — AI Recruitment Intelligence & Screening Engine

Jun 2025

Python, Flask, Groq LLaMA 3, Supabase, Gmail API, Google Calendar API, JavaScript, Tailwind CSS

- Worked out LLM-based evaluation pipelines for contextual resume understanding, candidate-job matching, and structured recruiter insights.
- Put together multi-stage recruitment pipelines supporting candidate upload, filtering, ranking, and comparison, reducing manual screening effort.
- Put together an admin dashboard and client tracking portal delivering real-time visibility into recruitment activity and hiring status.

A.T.L.A.S — Attendance Tracking & Leave Analytics System

Nov 2025

Python, Flask, Pandas, JavaScript, Excel Processing, Groq API

- Set up data pipelines to ingest, clean, and transform attendance datasets, applying anomaly detection to flag late arrivals and missing punches.
- Planned employee-level dashboards with department-wise filtering, translating raw shift and attendance records into actionable operational metrics.
- Integrated a natural language query interface powered by an LLM, enabling non-technical users to interact directly with attendance data.

LegalMind AI — Multi-Functional AI Legal Assistant

Jun 2025

Python, Flask, Groq LLaMA 3, RAG, FAISS, SQLite

- Connected LLM and Retrieval-Augmented Generation pipelines to power contextual legal reasoning and automated document summarization.
- Developed semantic analysis workflows for PDF ingestion and text extraction, supporting case prediction and legal insight modules.
- Mapped out modules for legal fee estimation and case prediction, applying model evaluation techniques to improve output reliability.

AI-Powered Jira Test Case Generator

Dec 2025

Python, Jira REST API, Gemini API, Pandas, Prompt Engineering

- Structured structured LLM prompts to auto-generate positive, negative, and boundary test cases from Jira requirements, reducing manual QA effort.
- Built an automated pipeline to ingest requirements, extract issue context from Jira REST APIs, and generate structured test cases at scale.
- Added duplicate-prevention and retry/error-handling logic to improve pipeline reliability during API failures.

EDUCATION

St. Joseph's Institute of Technology

2022 – 2026

B.Tech, Artificial Intelligence and Data Science | CGPA: 8.32

CERTIFICATIONS & ACHIEVEMENTS

- Shortlisted, Smart India Hackathon (Department Level) — Indian Sign Language AI Project
- Completed 100 Days of LeetCode Challenge — strengthened problem-solving and data structures skills
- NPTEL Certification: Python for Data Science (Score: 66%)
- Altair RapidMiner: Machine Learning Professional Certification
